Full-stack and systems engineer with 8+ years across TypeScript/SvelteKit, Python, Go, C/C++, Rust, Zig, Chapel, and Haskell — comfortable from user-facing product surfaces down to the kernel and firmware. Based in Lewiston, ME & Boston, MA.

Currently a DevSecOps Systems Analyst at **Bates College**: enterprise authentication (SAML / LTI / Shibboleth), ACME certificate automation, secret management, OpenTelemetry / LGTM / Tempo, GitLab AutoDevOps, OpenTofu and RKE2, and 24/7 CVE response — including rebuilding 1980s-era degree-management C as a property-based, container-friendly workload in Haskell + Python. Earlier, at the **Cornell Lab of Ornithology's Macaulay Library** (2019–2021), shipped **Merlin Sound ID**, a production fine-grained audio classifier used by millions (Objective-C / Swift, Python / TensorFlow, an FFT.js WASM front-end).

A long-standing FOSS *contributor* — Chapel (Mason registry; author of a [property-based testing package](#)), KeePassXC, rspamd, Klipper, FFT.js, and four years in GDAL/OGR — with recent PRs across [llama.cpp](#), ShikiJS, Futhark, xCaddy/libdns, svelte-superforms, cmux, nix-vm-test, and nixpkgs. Security and kernel research run alongside: a Rocky 10 PREEMPT_RT lane carrying [Dirty Frag CVE backports](#) (CVE-2026-31431, -43284, -43500) into LTS stable lanes ahead of public disclosure; original 2026 work [recovering write-protected NVMe SSDs](#) via ASMedia ASM2362 XRAM injection; and portable Zig libraries (cryptographic primitives, notifications, keychain access, FIDO2 over USB HID) with C-ABI surfaces.

Founder of [xoxd.ai](#) (2024–), a bootstrapped engineering and contracting firm, building **glorious.build**, a cache-first build and CI substrate (pre-launch). Founder of the [Great Falls Tool Bus](#), a member-run tool and gear lending library in Lewiston, ME, and builder of its site and member infrastructure.

Outside the terminal: multi-instrumentalist (20+ years guitar, organ) and an avid birder. **Always building** — the live view is at transscendsurvival.org and github.com/Jesssullivan.

The full resume and long-form CV accompany this précis at transscendsurvival.org/cv.
